

Innomotics

ReFresh.

Refurbishment of motors and drives:
A sustainable way to keep your assets
up to speed and embrace circularity.

INNOMOTICS

The race is on. **Let's win it.**

Sustainability is no longer a choice – it's a necessity. With tightening environmental regulations, rising costs, and the growing need for resource efficiency, the time to act is now. It's not just about being eco-friendly – it's about gaining a competitive edge and unlocking financial incentives such as green bonds and favorable loan terms.

Let's turn sustainability into your business advantage.

Circularity is the new linear.

Sometimes, going in circles is the best way forward – especially when it comes to driving sustainability.

From a linear perspective, the product lifecycle starts with raw material extraction and ends with disposal – wasting valuable resources along the way. A circular approach changes the game. Instead of disposing of products, they are refurbished or remanufactured – extending their lifetime, saving resources, and refreshing reliability with a lower investment.

It's time to bring circularity to your plant.
We're here to support you with our refurbishment portfolio for drives and large motors.

Let's refresh your system.

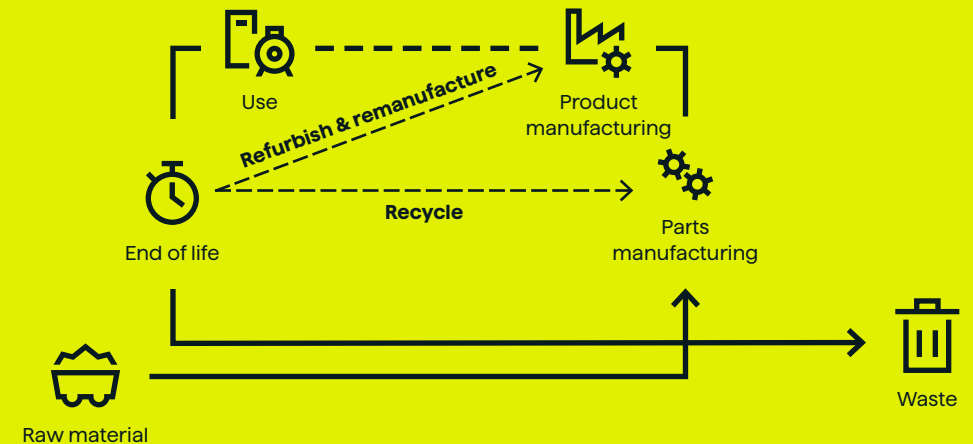

From a linear perspective ...

Raw material extraction to waste disposal

... to a circular approach

- Multiple equipment lives
- Saves resources
- Refreshes reliability with lower investments
- Extends product lifetimes

Refurbished drives. Refreshed reliability.

Your drives keep your production running – all the more reason to keep them running as well. Critical components like powercells or IGCT phase modules can fail with age – especially under harsh operating conditions. The consequence: Unplanned downtimes.

Our solution: Refurbishing of powercells in Innomotics Perfect Harmony GH180 and IGCT phase modules for Innomotics GM150 and SM150.

What you can rely on: OEM excellence – from sourcing to testing, decades of service experience and warranty from 12 to 24 months – for reliable operation and peace of mind.

Perfect Harmony GH180

Powercell refurbishment and remanufacturing

GM150

IGCT Phase Modules refurbishment and remanufacturing

SM150

Power on and on and on.

Every reliable production needs a motor that delivers. Innomotics motors are built for precisely that – even in the most extreme conditions. But over time, even the toughest equipment is subject to wear: bearings, insulation materials, rotors and stators can degrade with age.

The answer: Innomotics ReFresh.

We refurbish large motor components, so that you keep your existing configuration while benefiting from OEM excellence backed by 150 years of service experience. With an extended warranty, you can extend equipment lifetime and secure peace of mind – ensuring your operations run just as reliably as you expect them to.

As good as new. But higher sustainability.

Innomotics ReFresh is your ticket to a more sustainable and more efficient operation.

Instead of wasting resources, you're making a smart investment – turning sustainability into a competitive advantage. Our refurbishment portfolio is based on 150 years of service experience and provides you with:

Expert refurbishment of motors and drive systems with OEM quality

Extended product lifetime

Higher reliability with a lower investment

Resource-efficient operation

It's time to refresh your system – with Innomotics ReFresh.

**Sustainability
is not just about the planet.**

It's about securing

the long-term value

of your business.
